Mini Project: Integrating Generative AI in the AI Travel Planner App

Name: Nanle Joseph
Track: UI/UX Design
Project Title: Exploring Generative AI in User Experience

Generative AI Use Cases in the Travel Planner App

Generative AI offers several powerful applications that enhance the travel planning experience. Below are practical ways it can be integrated into the AI Travel Planner app:

1. Text Generation

- Generate personalized itinerary descriptions in a storytelling tone.
- Summarize destination highlights based on user preferences.

2. Image Generation

- Generate AI-based visual previews of destinations or landmarks.
- Create stylized trip cover images or postcards from the user's itinerary.

3. Personalized Suggestions

- Auto-generate packing lists based on weather and trip type.
- Suggest hidden local attractions tailored to the user's interests.

4. Conversational AI

- Chatbot for adjusting itinerary, changing activities, and answering questions.
- Assist users in planning through a conversational Q&A interface.

Core Generative AI Feature – AI Travel Companion Chatbot

Feature Name: AI Travel Companion Chatbot

What It Does:

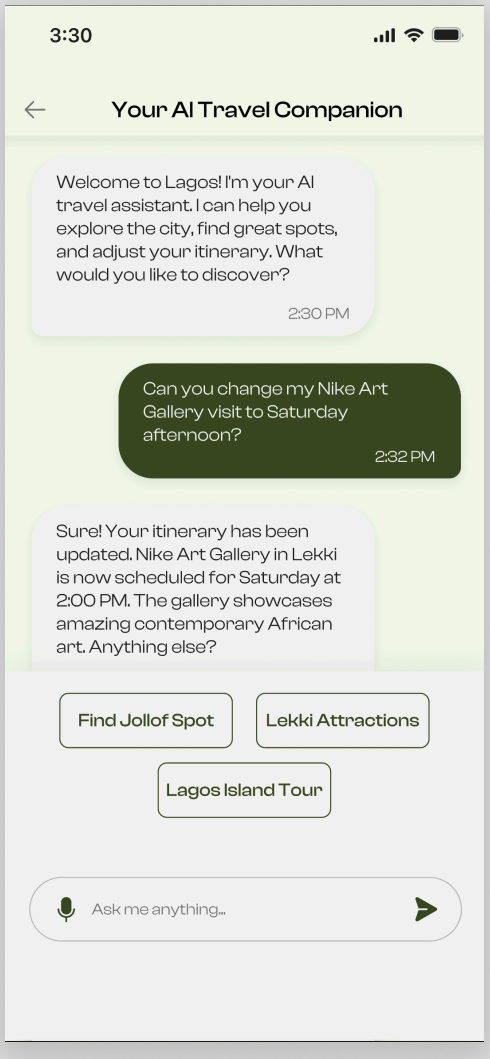

This AI-powered chatbot serves as an intelligent travel assistant that users can interact with to personalize and revise their travel plans. It handles real-time requests like modifying activities, adjusting time slots, adding new destinations, and offering local suggestions, all in a friendly and conversational tone.

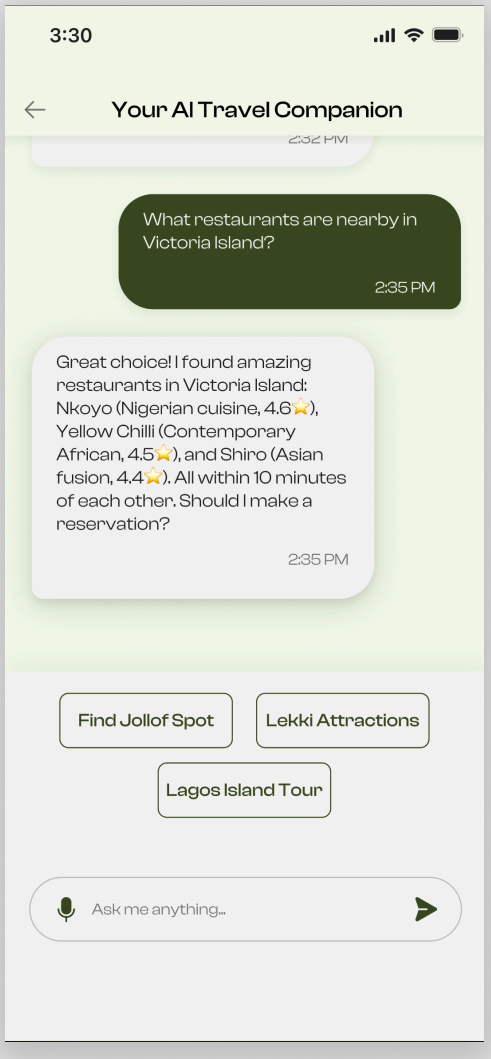

How Users Interact With It:

- Accessed from the itinerary or home screen.
- User types in requests like: "Change my lunch to dinner" or "Suggest romantic spots in Rome".
- AI replies with updated itinerary suggestions or confirmations.
- Includes quick-action buttons like: "Suggest restaurants", "Add a museum visit", "Edit time".
- Bottom input field supports typing, voice input, or emoji reactions.

Mockup Sample Screen Description

Screen Name: AI Chatbot Assistant

Layout Description:

- Top Header: “Your AI Travel Companion”
- Chat Section:
  - Left-aligned chat bubbles show user messages.
  - Right-aligned chat bubbles show AI replies in a friendly tone (e.g., “I’ve updated your plan!”).
- Quick Action Chips:
  - “Suggest Restaurants”
  - “Change Plan”
  - “Add Nearby Attraction”
- Bottom Input Bar:
  - Text input field (placeholder: “Ask me anything...”)
  - Mic icon for voice input
  - Send button icon
