Mini Project: Build a Style Guide & Design System

Project: AI-Powered Travel Planner
Name: Nanle Joseph
Track: UI/UX Design

Objective

This mini project focuses on building a consistent, scalable visual language for the AI-Powered Travel Planner App. I developed a visual style guide and a reusable component-based design system in Figma. These tools ensure interface consistency, support development, and create a more intuitive user experience.

Visual Style Guide

1. Typography

Typeface: Clash Display

Hierarchy Structure:

Style	Font	Size	Weight	Use Cases
Heading 1 (H1)	Clash Display	24px	Bold	Main Screen Titles
Heading 2 (H2)	Clash Display	20px	Medium	Section Headers
Body Text	Clash Display	16px	Regular	Paragraphs, Inputs
Button Text	Clash Display	16px	Medium	Primary & Secondary Buttons
Caption/Labels	Clash Display	14px	Regular	Supporting Info & Labels

Notes:

- Used consistent line height for readability (1.5× font size)
- High contrast between headings and body text for visual hierarchy

2. Color Palette

Purpose	Color Name	Hex Code
Primary Action	Olive Green	#3B4A20
Hover/Active State	Forest Green	#2F3414
Background Accent	Soft Sage	#F1F8E9
Card & Form Backgrounds	White/Mist Grey	#FFFFFF / #F4F4F4
Headline Text	Charcoal Black	#212121
Body Text	Natural Grey	#757575
Placeholder Text	Pale Grey	#BDBDBD
AI Suggestions	Mustard Yellow	#FBC02D
Info Banner BG	Soft Yellow Tint	#FFF8E1
Secondary Highlight	Warm Terracotta	#D87D4A
Error State	Alert Red	#B00020
Alert Background	Rose Tint	#FCE4EC

Contrast Ratio: Checked using WebAIM and meets WCAG 2.1 AA standard for text.

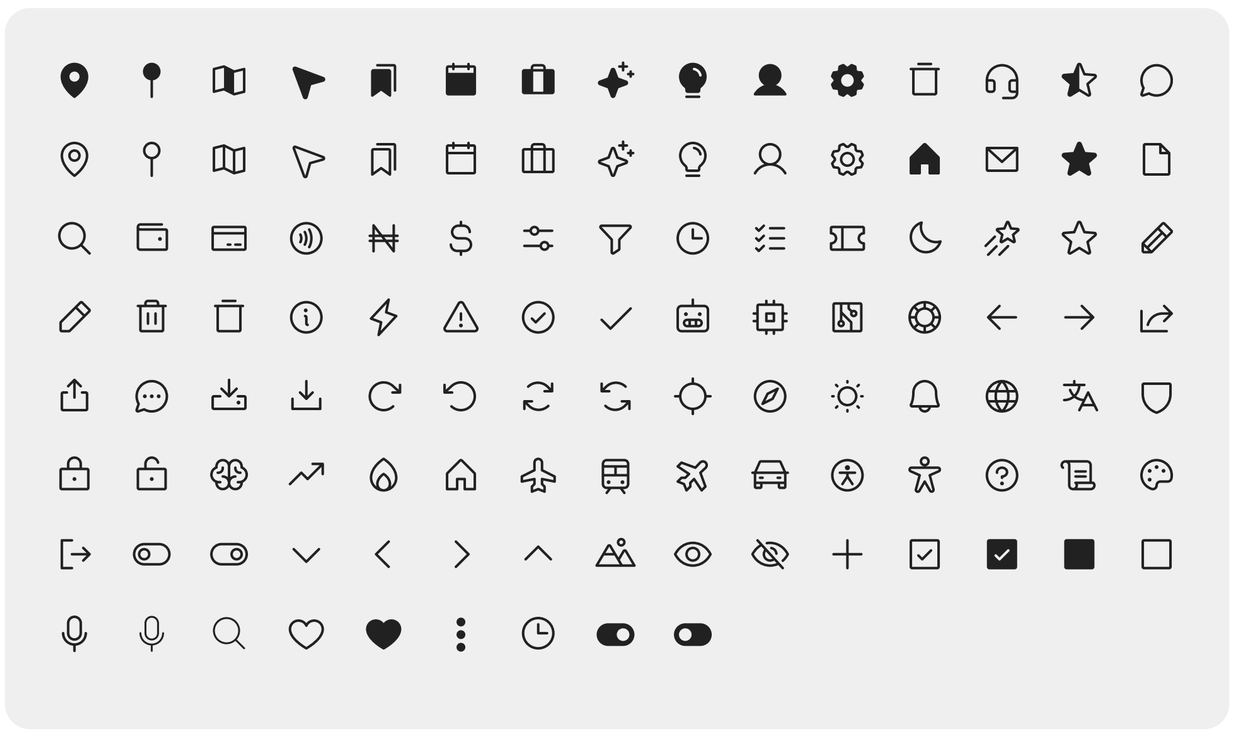
3. Spacing System
A modular scale was used across all screens for layout and padding:

Unit	Use Cases
4px	Micro spacing (e.g., icon gap)
8px	Padding inside small buttons
16px	Standard spacing between elements
24px	Section padding or layout blocks
32px	Major layout structure spacing

Notes: Auto Layout in Figma was used to keep spacing consistent.

4. Iconography
Style:

- Line icons with rounded edges
- Stroke width: 1.5px
- Size: 24×24px for standard UI icons



Icons Used

- Refresh
- Trending up (popular destinations)
- Edit/pencil
- Trash/delete
- Info (destination info)
- Lightning bolt (quick actions)
- Warning triangle (alerts)
- Checkmark (completed tasks)
- Calculator (budget calculator)
- Chart (travel analytics)
- Left arrow
- Right arrow
- External link
- Upload/share
- Download
- Undo
- Sun (weather)
- Globe (international travel)
- Translate (language support)
- Shield (travel insurance/safety)
- Lock (secure booking)
- Flame (trending/hot deals)
- Airplane
- Car (transportation)
- Accessibility
- Person walking (walking directions)
- Help/question
- Eye (view details)
- Toggle switch (preferences)
- Location pin
- Map pin
- Map/navigation
- Send/paper plane
- Bookmark
- Briefcase
- Suitcase
- Sparkles (AI suggestions)
- Lightbulb (ideas/recommendations)
- User/person
- Settings/gear
- Headphones (audio guides)
- Star (favorites/ratings)
- Chat bubble (AI assistant)
- Calendar
- Home
- Mail/envelope
- Document (itinerary)
- Search/magnifying glass
- Folder (trip folders)
- Credit card (payments)
- Dollar sign (budget)
- Filter (search filters)
- Clock (time/schedule)
- Menu lines
- Plus (add to trip)
- Heart (wishlist)
- Microphone (voice search)

Icons maintain visual consistency and are optimized for legibility on mobile.

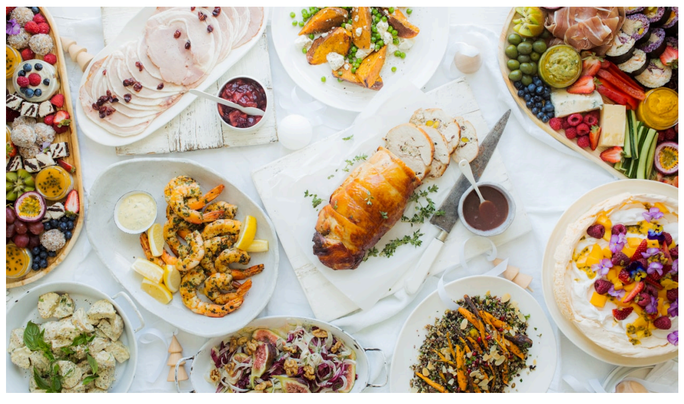
5. Imagery

Style:

- Real images of destinations used in cards and onboarding
- Slight overlay inner shadows for text readability
- Profile avatars and chat elements use soft shadows and rounded edges

Direction:

- All images should feel light, aspirational, and represent real travel experiences
- Color correction leans toward warm tones to match brand palette



6. Elevation / Shadow System

Use Case	Elevation	Shadow Detail
Cards (pressed)	Level 1	0px 2px 8px rgba(0,0,0,0.06)
Active modals	Level 2	0px 4px 12px rgba(0,0,0,0.1)
Floating buttons	Level 3	0px 6px 16px rgba(0,0,0,0.12)

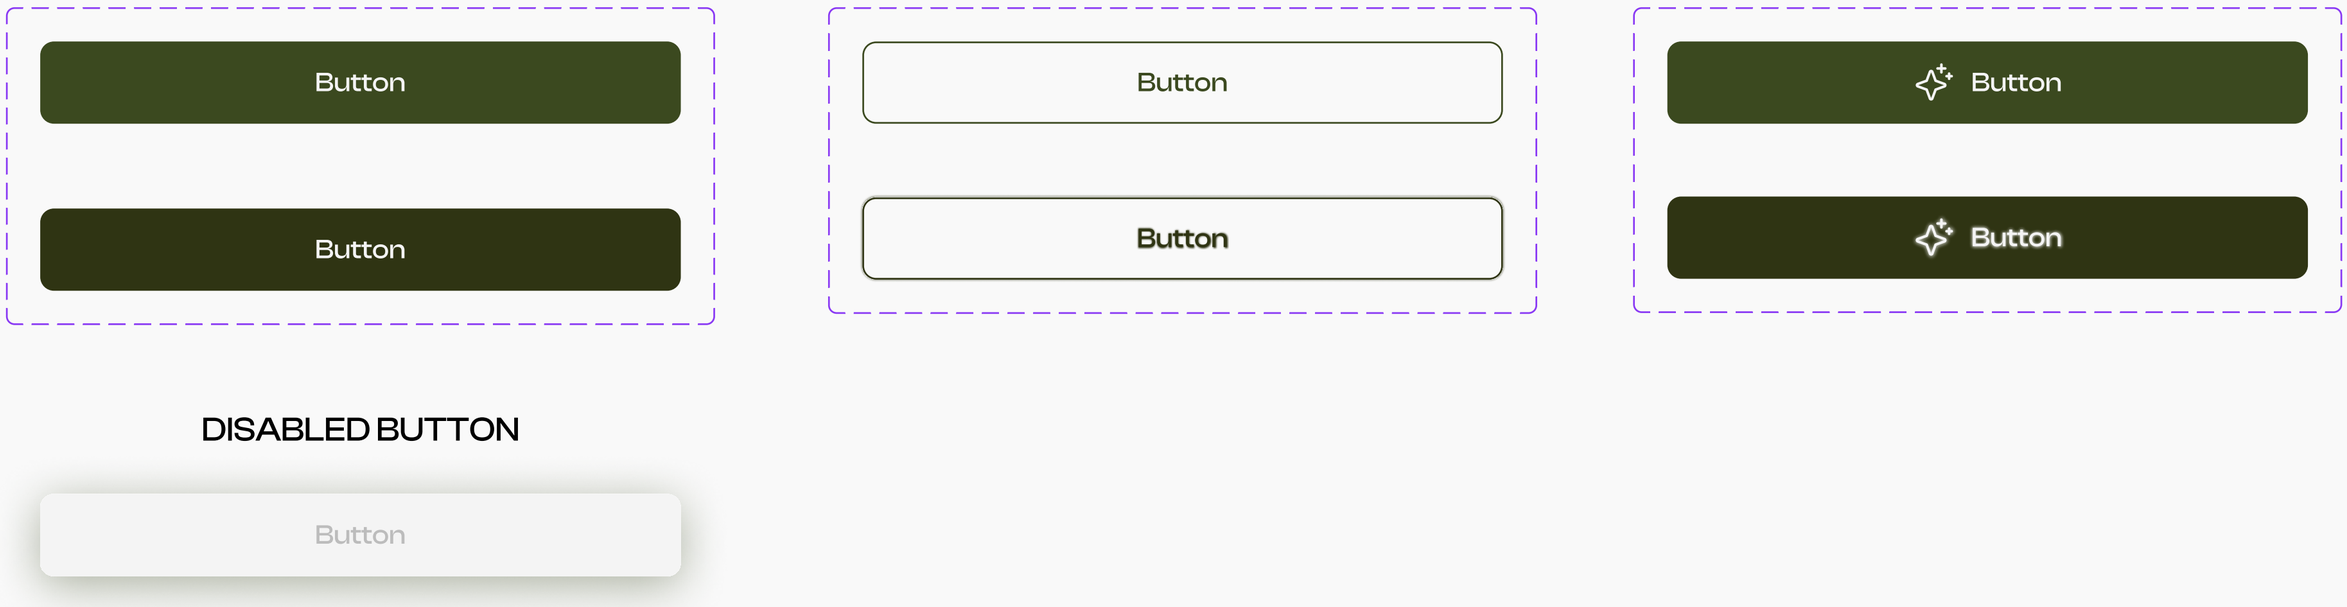
Component Library (Design System)
Reusable UI elements were created in Figma using Variants and Auto Layout for flexible, scalable design.

1. Buttons

Component: Button
Variants:

- Primary (Default, Pressed, Disabled)
- Secondary (Default, Pressed)
- Icon + Text Button

Micro-interaction: Button color changes on press



2. Input Fields

Component: Text Input
Variants:

- Default (with placeholder)
- Focused (active)
- Filled (with user input)
- Error State (with red border + message)

Micro-interaction: Border color changes on focus; error message fades in when invalid input is detected

Re-enter your Password

Mis-matched Password

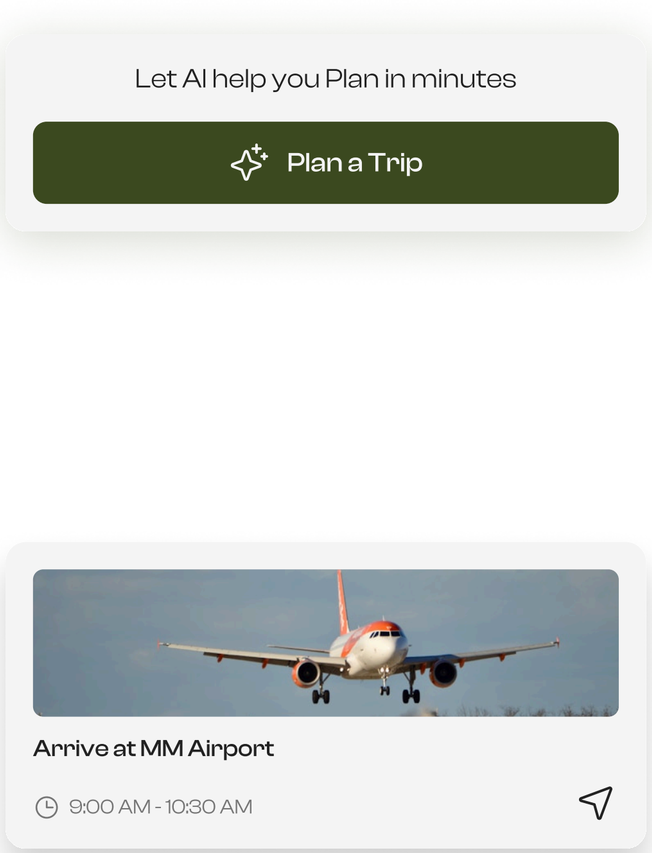
Enter your email

Email Address is correct

3. Cards

Component: Destination Card / Itinerary Card

Micro-interaction: Cards animate on hover; content expands or collapses smoothly

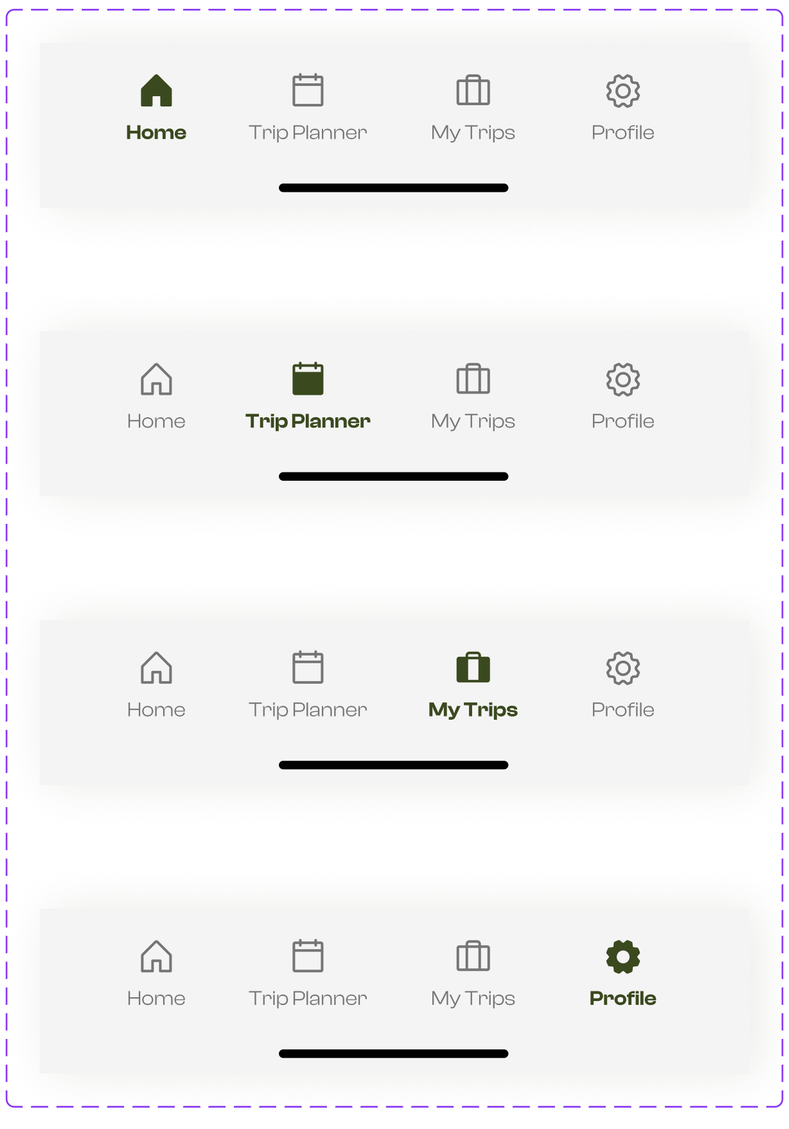


4. Bottom Navigation Bar

Component: Bottom Nav
Variants:

- Home (active/inactive)
- Trip Planner (active/inactive)
- My Trips (active/inactive)
- Profile (active/inactive)

Micro-interaction: Tab icon fills and label bolds on selection

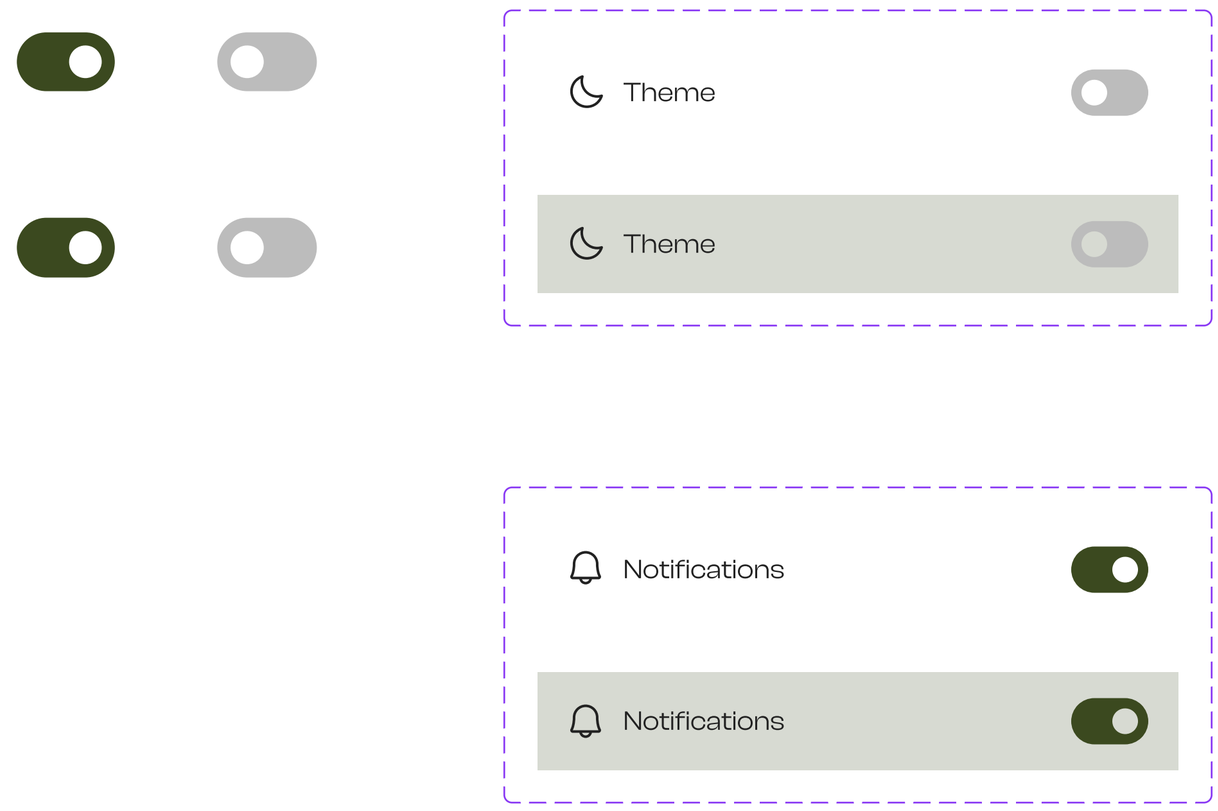


5. Toggle Switch

Component: Settings Toggle
Variants:

- On
- Off

Micro-interaction: Toggle smoothly slides with color transition when tapped

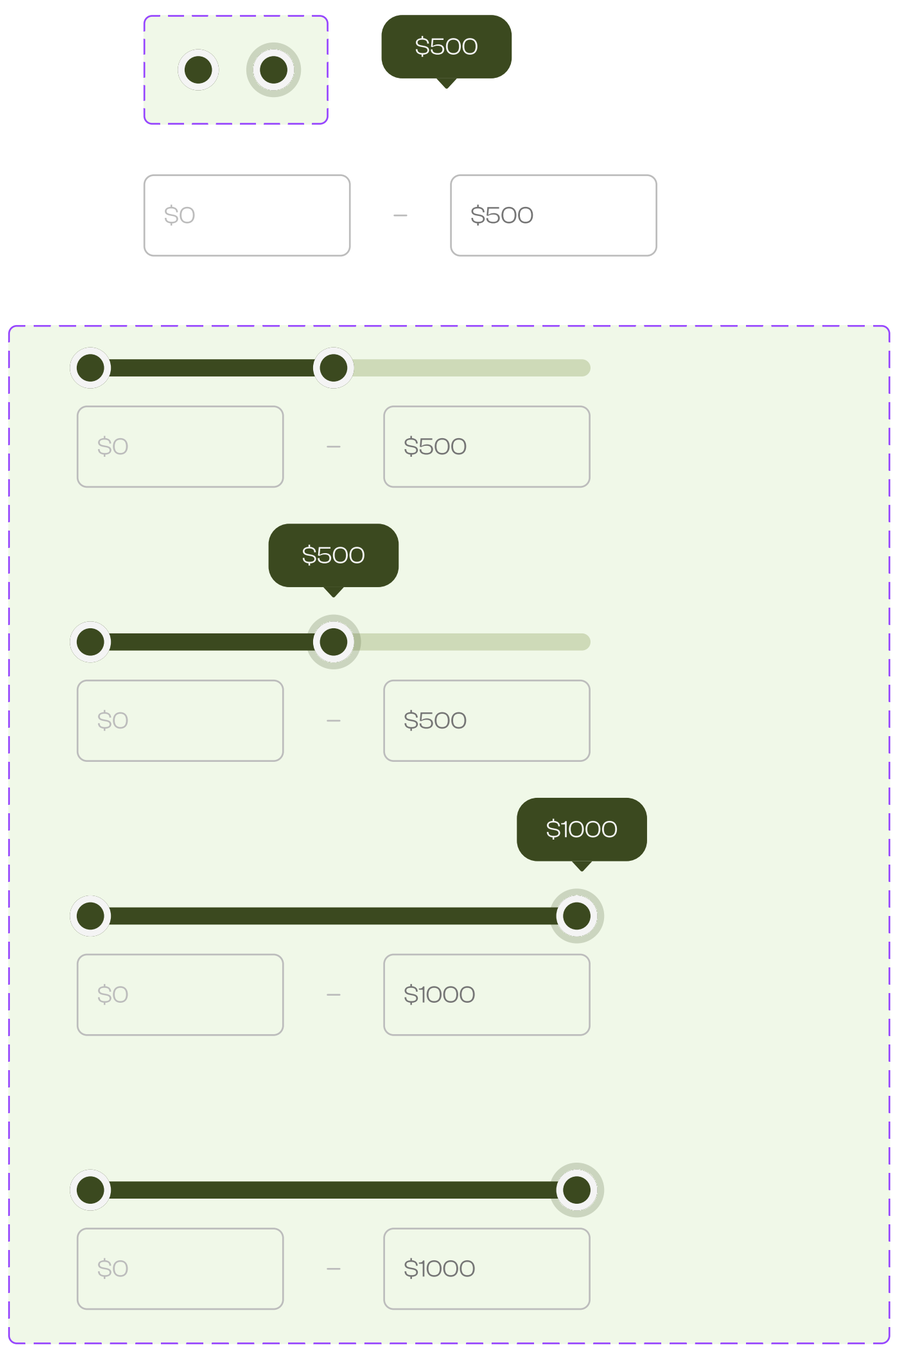


6. Range Slider

Component: Budget Range Slider
Variants:

- Default
- Dragging
- Filled (with values selected)

Micro-interaction: Smooth transition as the slider is dragged, with real-time feedback displayed in a bubble or label

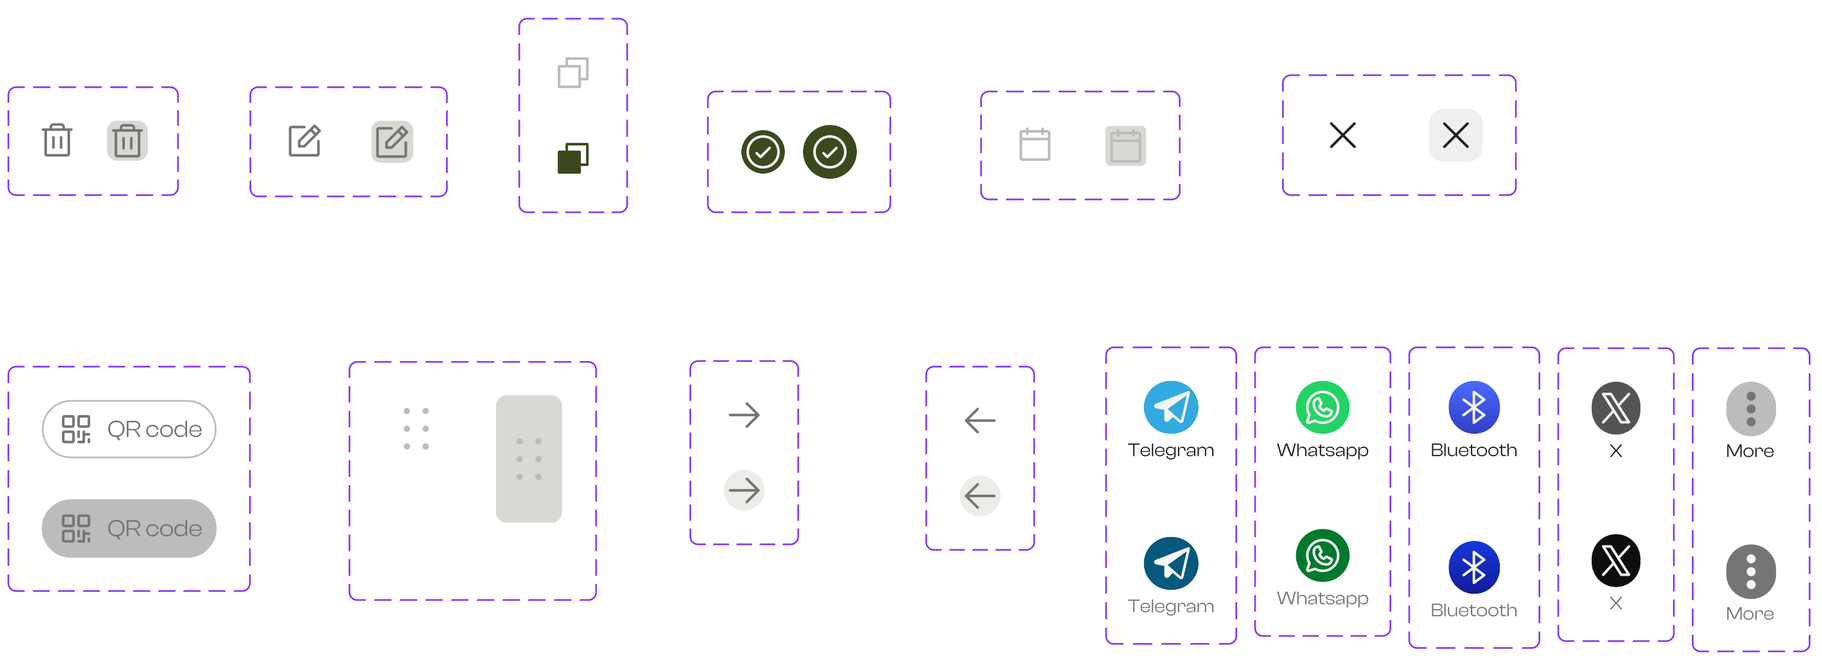


7. Icons (Reusable Components)

Component: Icon Set
Variants:

- Active / Inactive states
- Filled / Outlined styles
- Color-coded versions for accessibility

Micro-interaction: Selection triggers scale or color change for feedback

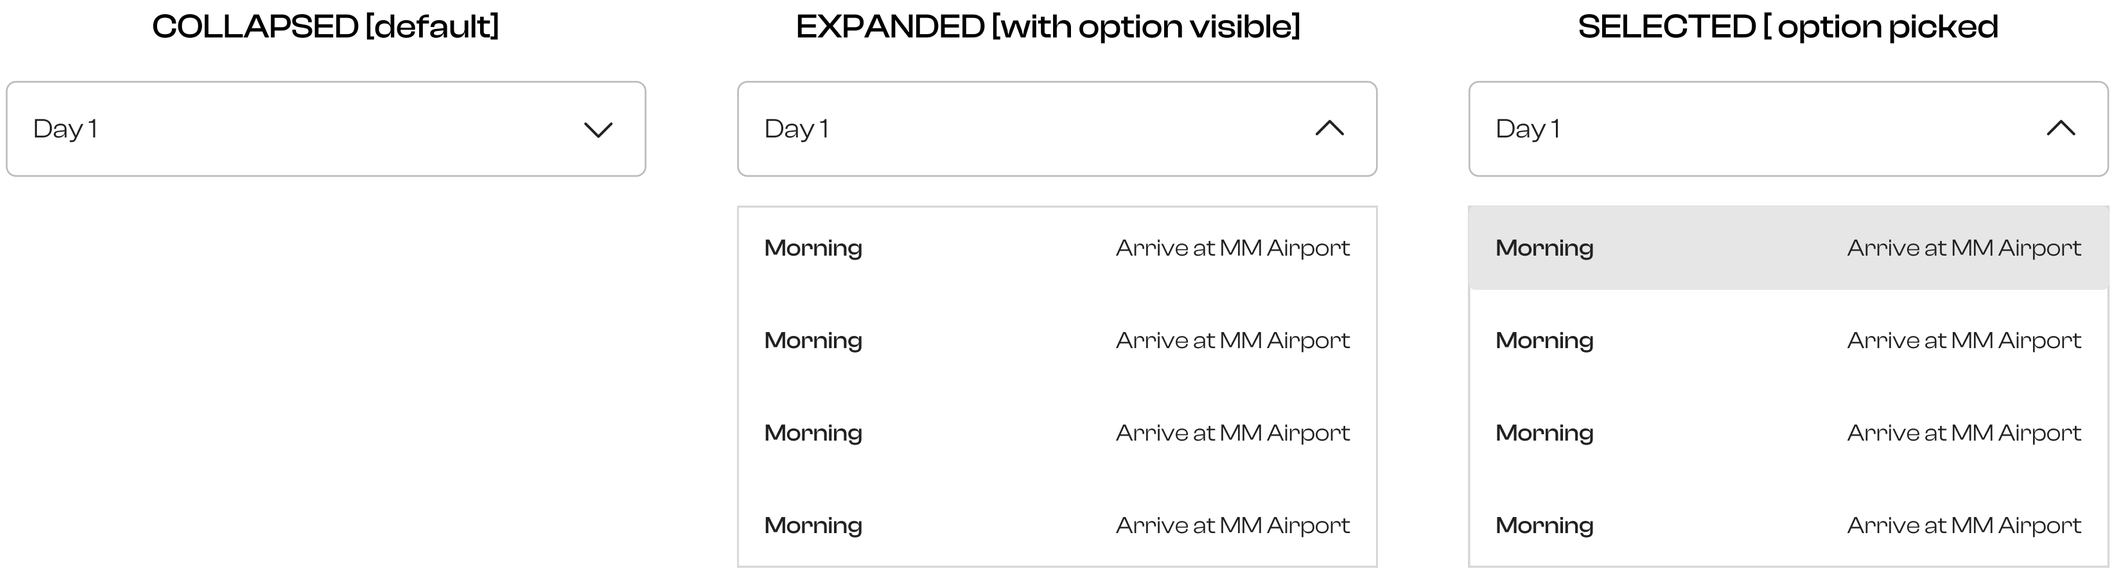


8. Dropdown Menu

Component: Dropdown Field
Variants:

- Collapsed (default)
- Expanded (with options visible)
- Selected (option picked)

Micro-interaction: Dropdown expands with animation and fades in options



Reflection

Creating a unified style guide and design system helped me think like a product designer. I realized how important consistency, accessibility, and flexibility are for building scalable interfaces. Using variants and auto layout improved my efficiency. If I had more time, I'd explore token-based systems and dark mode styling.
